

Global Environment Policy

Environmental Policy

At One Mobility Group, we recognize our responsibility to protect the environment and contribute to a sustainable future. This policy outlines our commitment to improve our environmental performance by minimizing our environmental impact across all aspects of our operations worldwide.

Guiding Principles

1. Compliance
 - We will pursue and comply with all applicable environmental laws, regulations, and internationally recognized standards at local, national and global levels.
 - Our operations are designed to meet or exceed legal/regulatory requirements for emissions, waste management, and resource conservation.
2. Environmental, Energy and Greenhouse Gas (GHG) Management System
 - All our country of operations will assess and mitigate their environmental, energy and climate related risks and improve their performance as part of their ISO 14001 Environmental Management System and ISO 50001 Energy Management System.
 - All of country of operations will regularly calculate GHG emissions and prepare a GHG inventory system in line with global standards.
3. Pollution Prevention

We are committed to implementing measures to prevent spills, emissions, discharges, noise, and the release of hazardous materials that may cause environmental pollution.
4. Sustainable Resource Management
 - We will optimize the use of resources, including energy, water, and raw materials, with a focus on reducing losses or waste.
 - We will promote energy efficiency methodologies, programs, and technologies as a priority in our production, R&D facilities, and administrative offices.
5. Decarbonization & Renewable Energy
 - We will minimize our emissions of GHG emissions and set reduction goals to achieve Science Based Net Zero Targets by implementing decarbonization programs such as energy efficiency, renewable energy generation and procurement, or other measures in our operations and value chain.
 - Production processes, product design and engineering efforts will focus on cleaner technologies or lower emissions.
 - We will measure the carbon footprint of our products and set product carbon footprint goals to reduce our GHG emissions related to material production, selection, and use.

6. Waste Reduction, Reuse and Recycling

- Waste reduction, reuse, recycling, recovery, repair and responsible disposal are integral to our operations in line with the circular economy strategy.
- We will take measures to optimize materials and minimize waste using process control systems and implementation of low emission and low waste strategies and methodologies, in cooperation with our business partners and suppliers.
- We will increase the use of secondary (recycled) and lightweight materials to reduce environmental impact across the product lifecycle.

7. Responsible Sourcing

- We are committed to sourcing products and materials in a responsible and sustainable manner that minimizes environmental, health, safety, social, and ethical impacts including deforestation and animal welfare.
- We will respect and align with the internationally recognized sourcing standards, practices, and initiatives in our industry.

8. Capability Building

We will conduct training, awareness, communication, and engagement activities to build a sustainability culture that promotes responsible, ethical, and climate-friendly behavior among our employees.

9. Initiatives

- We will actively participate in environmental, energy, climate and sustainability initiatives to help protect the environment, natural resources, biodiversity, and the climate, and to improve our performance and demonstrate our commitment to environmental and social responsibility.

10. Continuous Improvement

- We will set goals and implement programs each year to improve our environmental performance continuously.
- Regular internal and external assessments, audits, and reviews will guide our efforts to improve our environmental performance and reduce our ecological footprint.

11. Disclosure

- We will transparently report our environmental data, practices, and performance results through an annual sustainability report and regular communication channels continually.

At One Mobility Group, we are committed to safeguarding the planet and climate for future generations. By implementing an environmental management system and integrating environmental considerations into our business practices, we strive to be a sustainable and responsible company in the mobility industry.
